Brešar, Matej; Fernández López, Antonio
On a class of finitary Lie algebras characterized through derivations
Proc. Am. Math. Soc. 138, No. 12, 4161-4166 (2010).

MSC Classification: 17B40 17B65 16W10

Keywords: Derivation, finite rank, nonassociative algebra, simple Lie algebra, finitary Lie algebra, inner ideal.

Review text:

Recall that a Lie algebra L over a field \mathbb{F} is said to be finitary if it is isomorphic to a subalgebra of the Lie algebra $\text{fgl}(X)$ of all finite rank operators on a vector space X over \mathbb{F} . The classification of the infinite dimensional finitary simple Lie algebras over a field of characteristic 0 was given by A.A. Baranov, [finitary simple Lie algebras, J. Algebra 219 (1999) 299–329]. In [Journal of Algebra, 319 (2008), 2372–2394] A. Fernández, E. García and M. Gómez proved that a simple Lie algebra L over a field \mathbb{F} of characteristic 0 is finitary if and only if it contains a finite dimension abelian inner ideal.

In the paper under review the authors prove that every derivation of an infinite-dimensional simple Lie algebra L over a field of characteristic 0 has infinite rank. Moreover, they prove that if an infinite-dimensional simple Lie algebra L over a field of characteristic 0 contains a derivation d , where d^n is nonzero and has finite rank ($n \geq 2$) then L contains a finite-dimensional abelian inner ideal, and therefore it is finitary.

The control sequence at the end of the top line
of your error message was never \def'ed. If you have
misspelled it (e.g., '\hobx'), type 'I' and the correct
spelling (e.g., 'I\hbox'). Otherwise just continue,
and I'll forget about whatever was undefined.
